

# MAPPING THE LWA POWER PATTERN

D. JACOBS – ARIZONA STATE UNIVERSITY

LWA USERS MEETING, JULY 30 2020

**ASU** SCHOOL OF EARTH  
& SPACE EXPLORATION  
ARIZONA STATE UNIVERSITY

AST-1711179

# THE ECHO TEAM

David Lewis  
(ASU Tech)

Mickey Horn  
(ASU Tech)      Mrudula Gopalkrishna  
(ASU Grad)

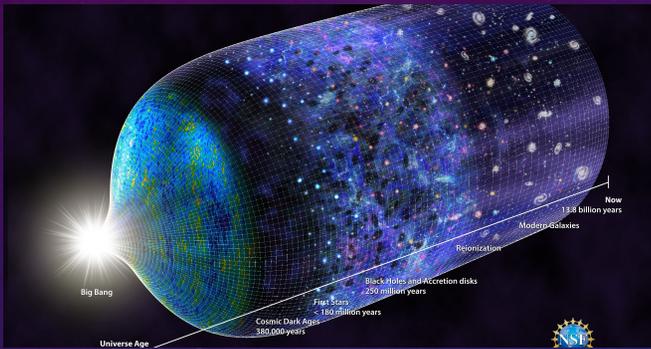

Shanika Davis  
(ASU Undergrad)

Titu Sampson  
(ASU Engineer)

# MOTIVATION #1: COSMIC DAWN FOREGROUNDS

spectrum

Source straight up (at zenith)

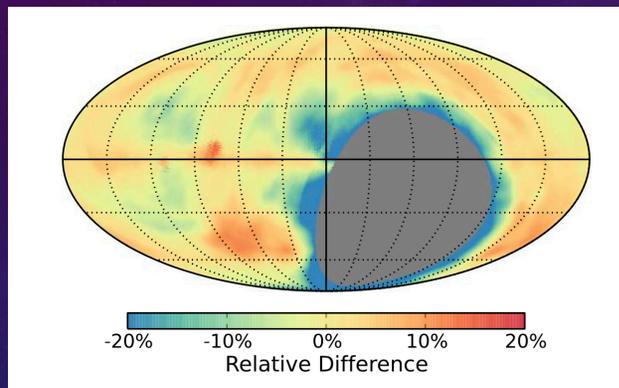

Same source far off axis

Requirement: Accurate map of in-situ beam pattern to 1% in FWHM, 10% outside (Ewall-wice et al 2017)

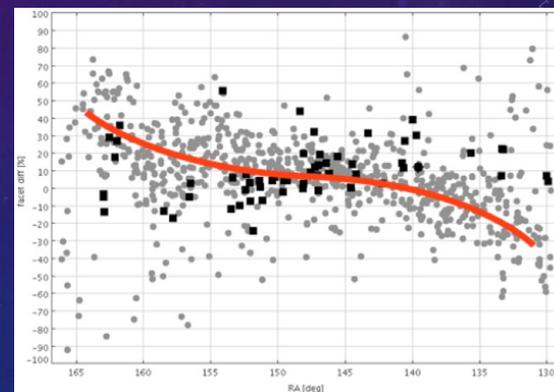

# MOTIVATION #2: IMAGING

LWA Sky Survey % difference from GSM

Dowell et al 2017

% Flux Difference between two MWA pointings

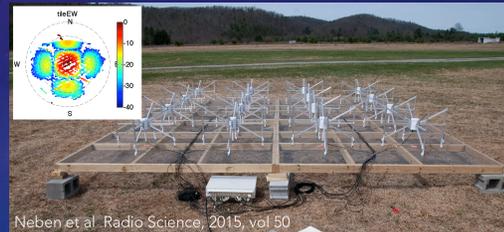

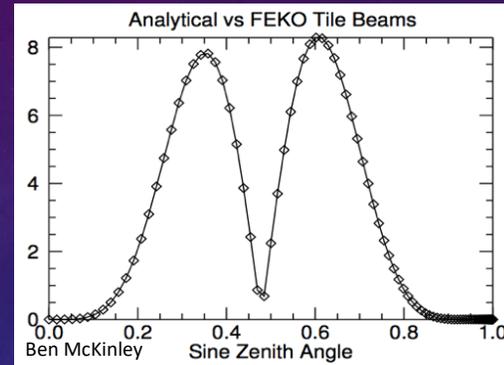

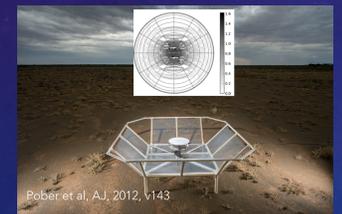

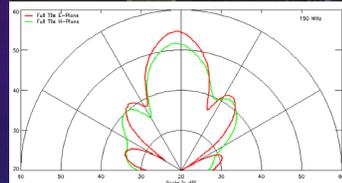

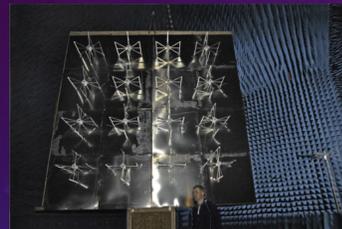

Jacobs et al 2013

Requirement: (whatever you want your flux or polarization accuracy to be)

# HISTORY OF BEAM MAPPING (BRIEF)

- Anechoic Chambers
- Range testing
- E&M models
- Sky sources
- Satellites
- Helicopters (real ones)
- Drones

Requirement: Map beam voltage pattern to better than 1% to horizon.

Goal: Improve on previous methods in terms of speed, reliability, repeatability, spectral coverage, polarization, etc

# EXTERNAL CALIBRATOR FOR HYDROGEN OBSERVATORIES

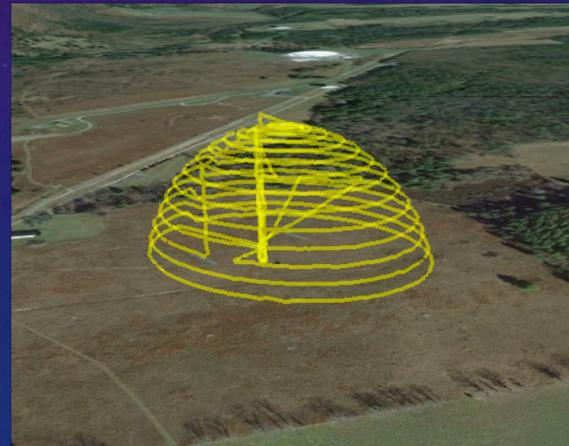

Transmits known  
Calibration signal

record amplitude as a  
function of GPS position

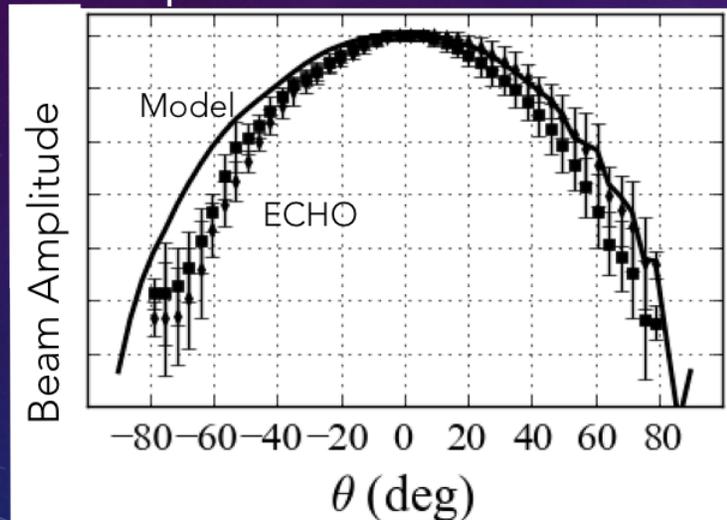

Complete spatial coverage

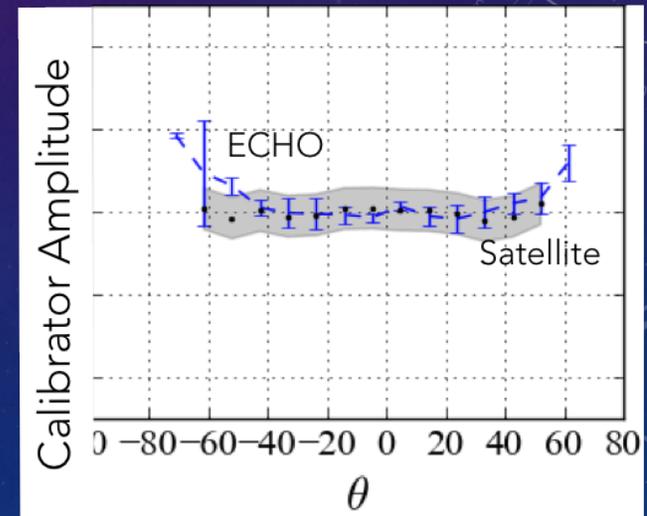

# ECHO TEST PERFORMANCE

## Comparison with Model

angle from zenith

## Comparison with other data

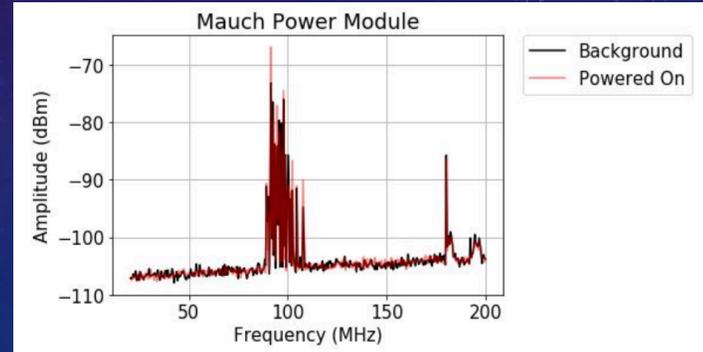

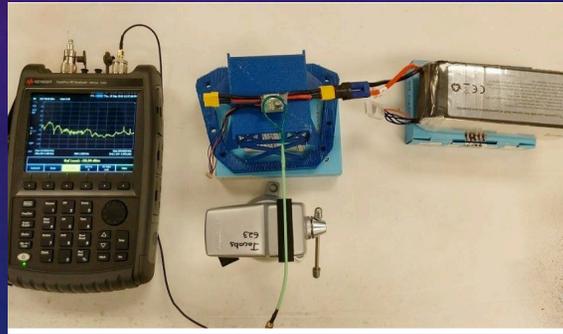

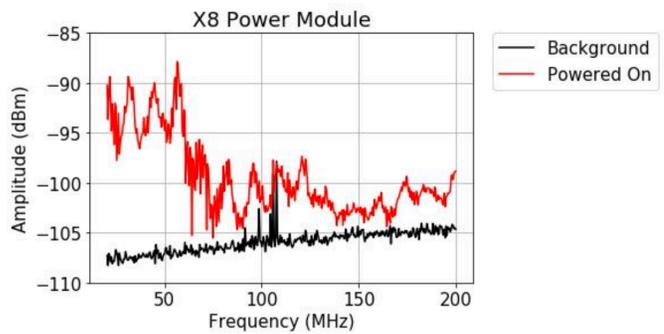

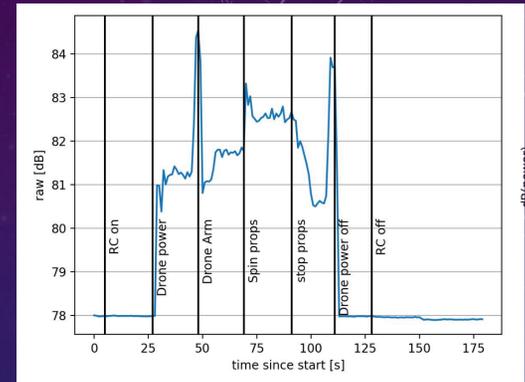

angle from zenith

Jacobs et al 2017

# MITIGATING SELF INTERFERENCE

Power supply radiation, discovered in testing at OVRO

Noisy Power supply

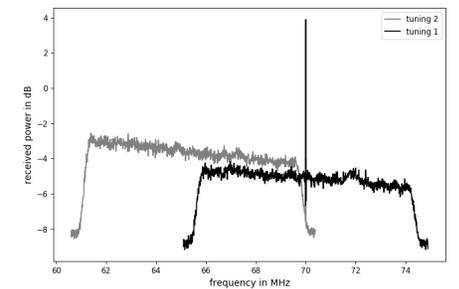

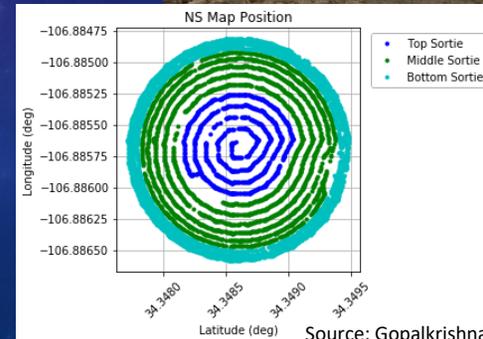

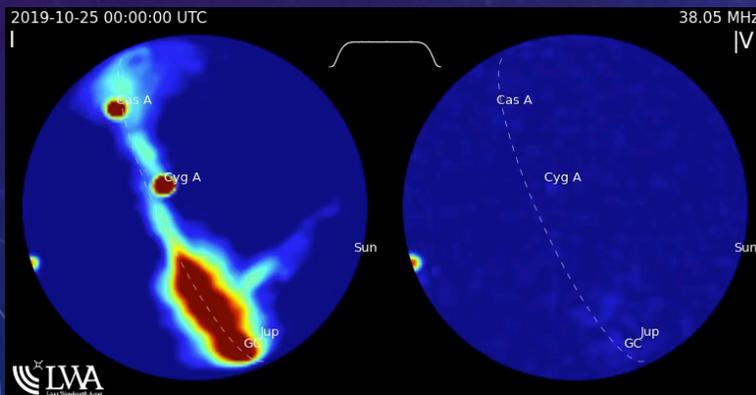

H Probe test setup

Best power supply

See ECHO Memo #30 [danielcjacobs.com/echo/memos](http://danielcjacobs.com/echo/memos)

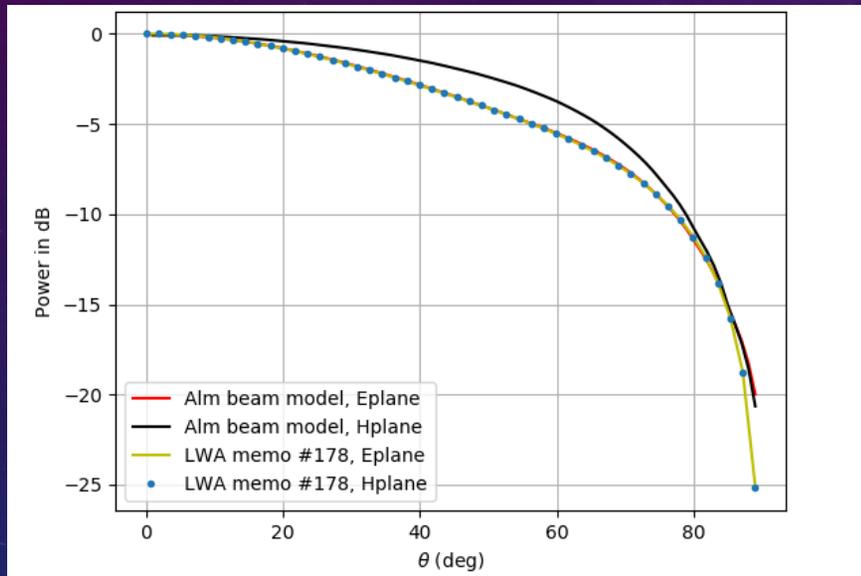

# SEVILLETA MAPPING CAMPAIGN

- October 2019
- Mapped single central antenna
- Beamformer mode (with all other ants x0)
- Recorded Spectra every 0.1s
- Transmitter: tone at 70MHz, -15dBm

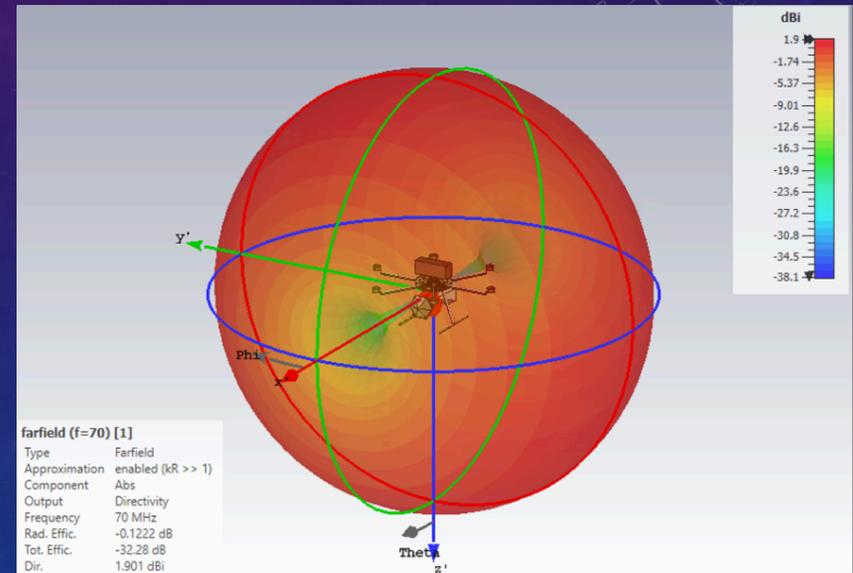

# MODEL (RX BEAM + TX BEAM + PATH LOSS)

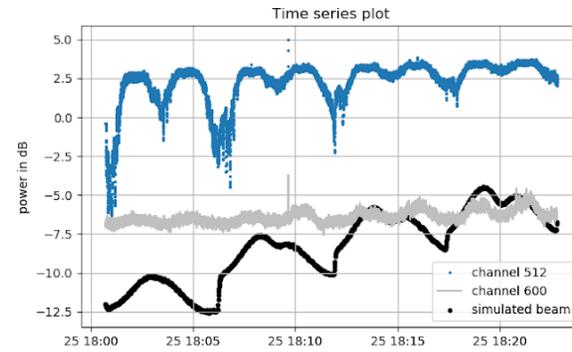

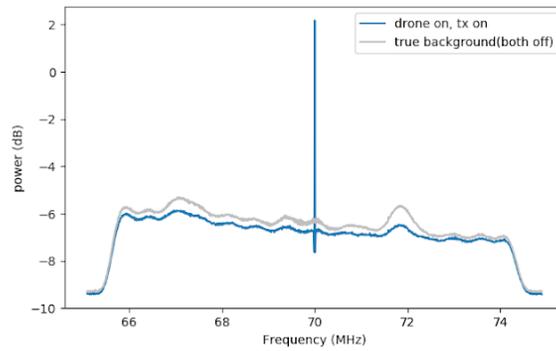

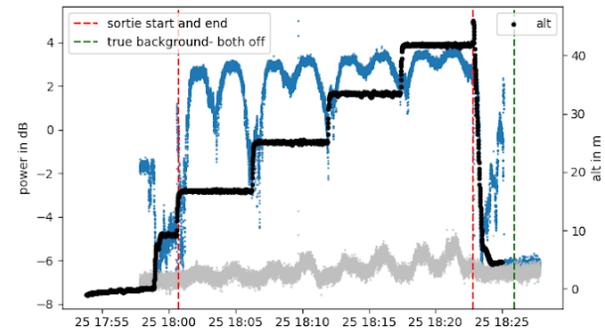

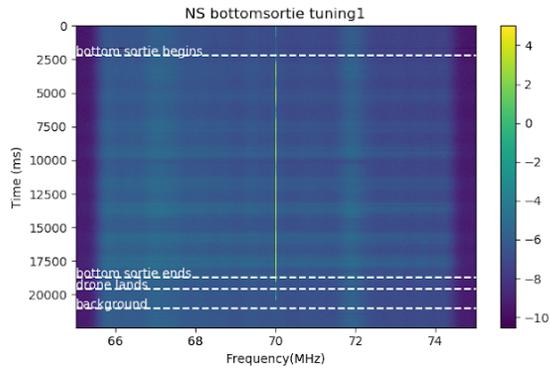

LWA Beam Model

CST Drone Model

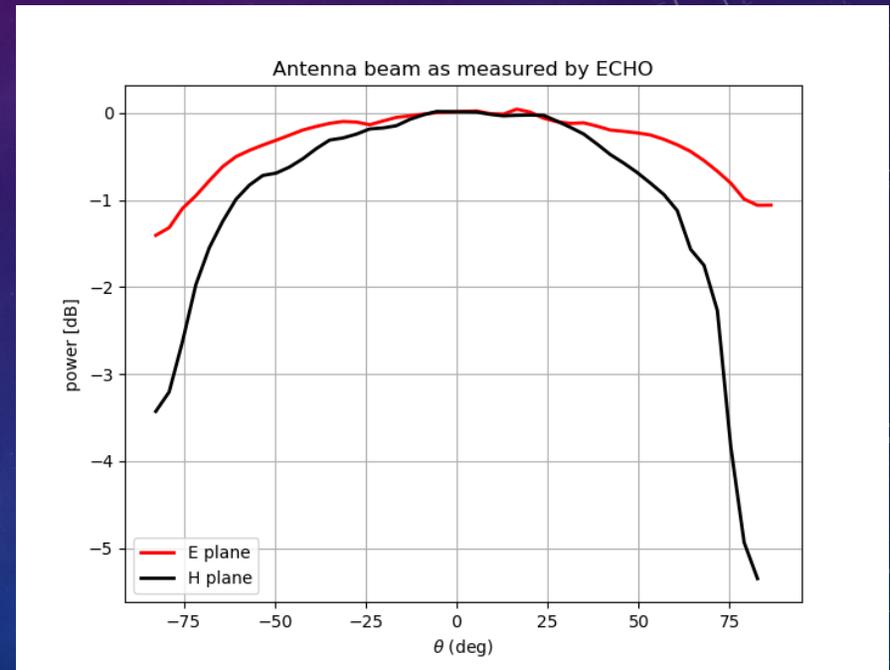

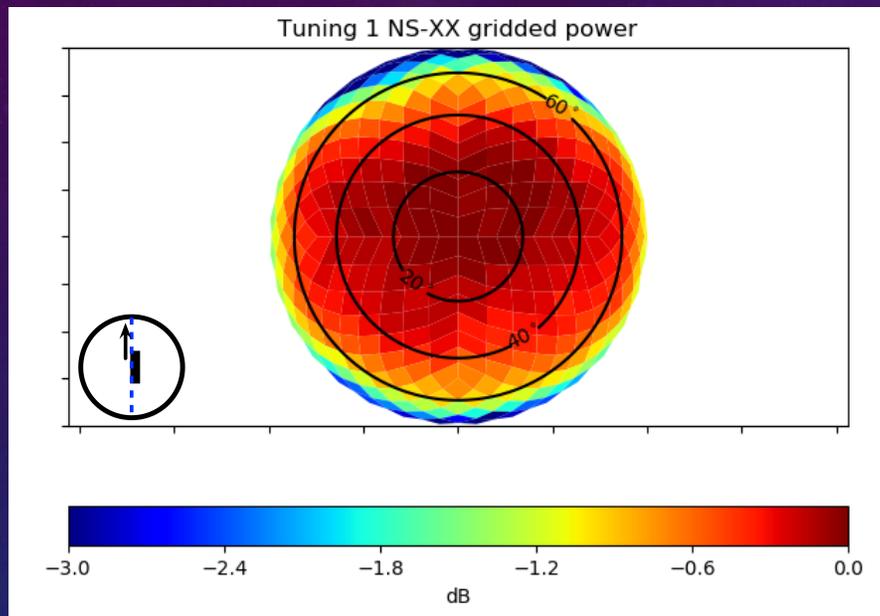

# EXAMPLE DATA

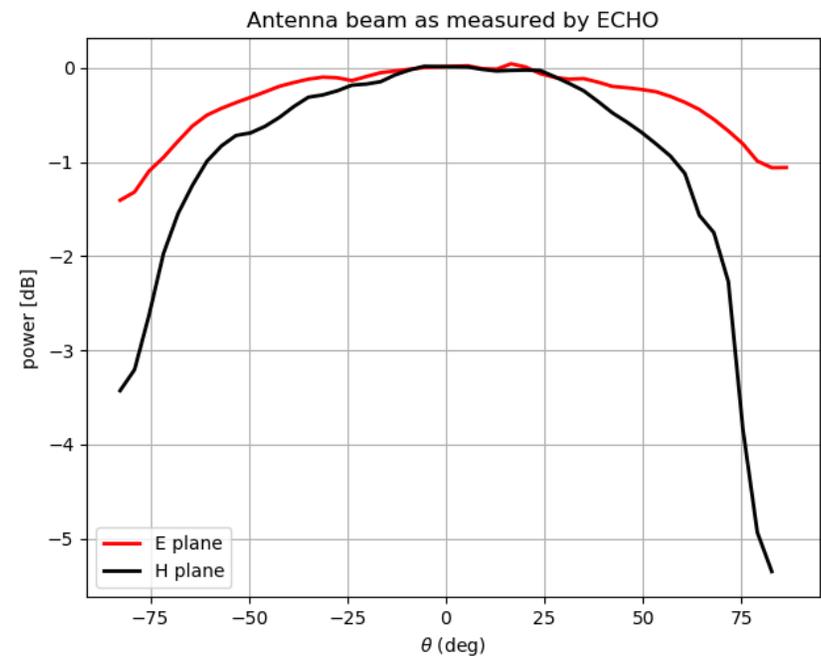

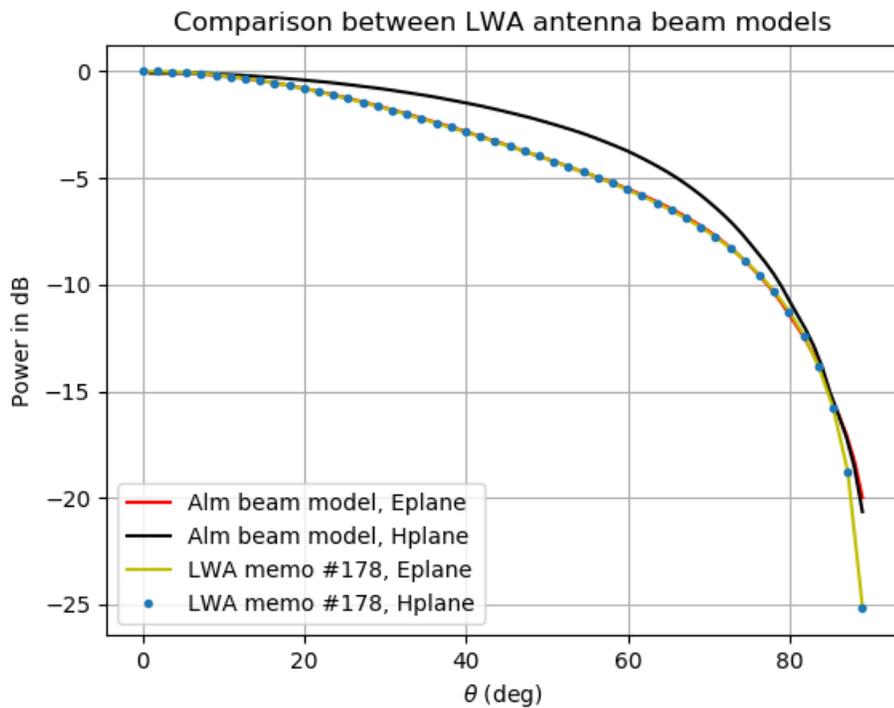

Source: Gopalkrishna

# RESULTING BEAM MAP

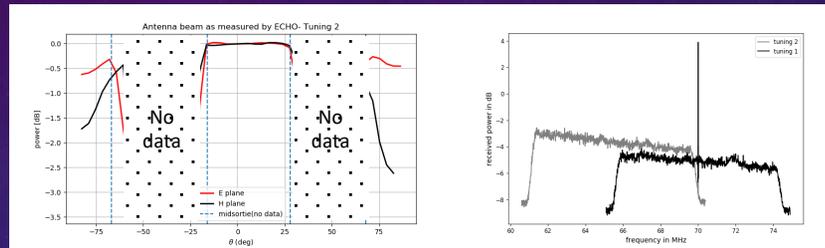

# COMPARISON TO MODEL (SOMETHINGS A BIT OFF...)

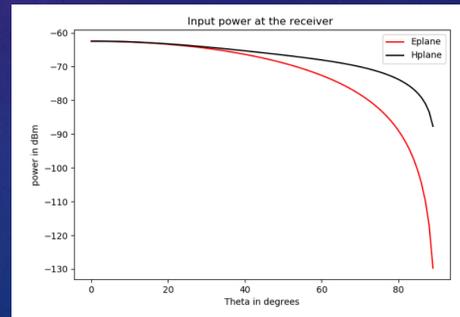

# POTENTIAL ISSUES EXAMINED

- Digital compression/clipping
- Analog compression
- Tx power drift
- Analysis Bug

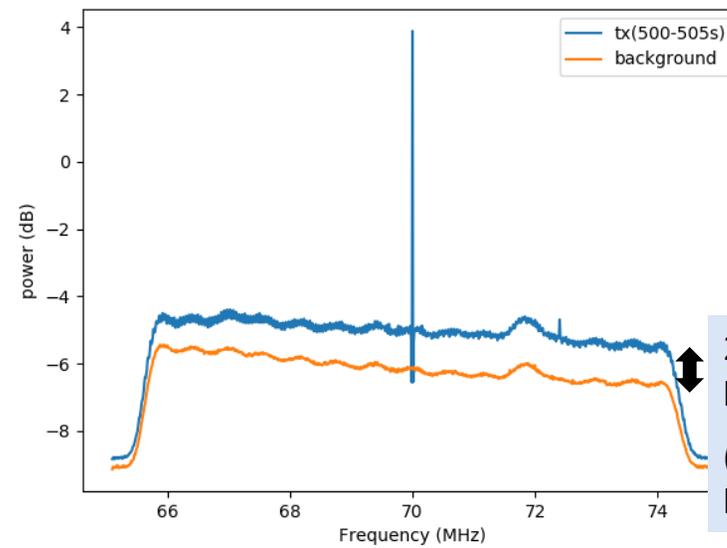

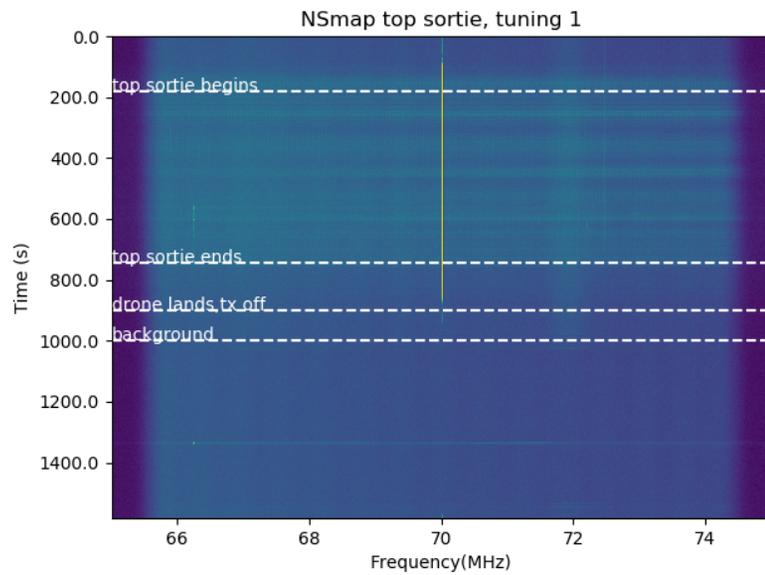

Tuning 2 with tone in digital passband rolloff, still compressed.  
Probably not digital compression

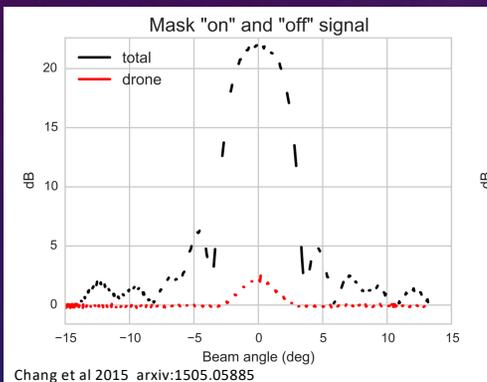

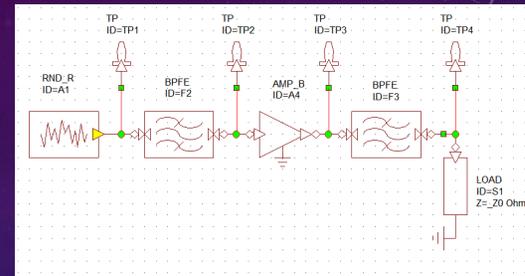

Simulated power level at LNA <-60dBm  
Well below compression point -18dB  
(Ellingson 2013)

# SELF EMI ASSESSMENT

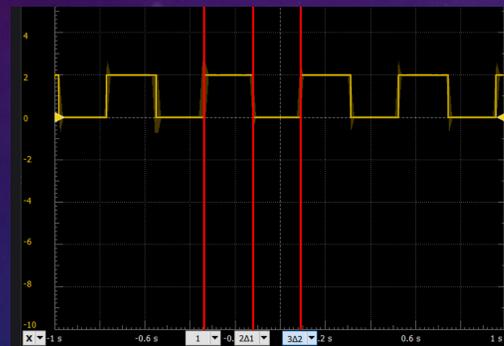

2dB above  
background?  
(assuming  
linearity prevails)

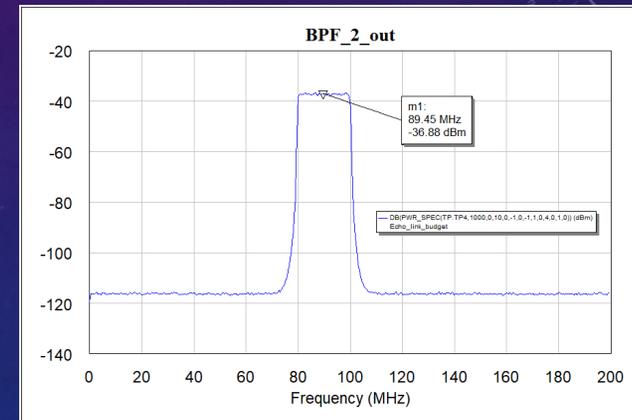

# CURRENT WORK

Transmitter Chopper

Status: Breadboard prototype (Mickey Horn)

Wideband noise source V1 prototype ordered (Titu Samson)

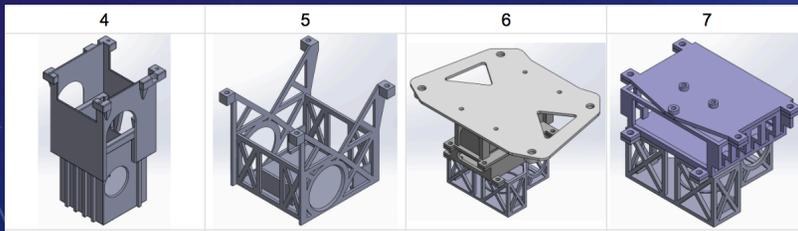

# ECHO IS OPEN SOURCE HARDWARE AND SOFTWARE!

[github.com/dannyjacobs/ECHO](https://github.com/dannyjacobs/ECHO)

[danielcjacobs.com/research/ECHO](https://danielcjacobs.com/research/ECHO)

We crash drones so you don't have to.

A screenshot of a GitHub repository page for 'dannyjacobs/ECHO'. The page shows a commit titled 'Update and rename ECHO\_Summary.rst to ECHO\_hardware\_summary.rst'. Below the commit is a table titled 'ECHO Version Summary' which lists various drone configurations and their components.

Version	Drone Make	Drone Frame	Drone Name	Tx Mount	Transmitter	Antenna	Flight Software
1	Mystery Inc.	Octo	Brain			BicoLOG 5070	
2	Flamewheel	Quad	Crater			BicoLOG 5070	
3	3D-Robotics	X8	Pancake			BicoLOG 5070*	
4	3D-Robotics	X8	Waffle	<a href="#">Sliding_Mount</a>	Blackbox	BicoLOG 5070*	
5	3D-Robotics	X8	Killer	<a href="#">X8_Mount_v1</a>	Blackbox	BicoLOG 5070*	
6	Steadidrone	Vader	Vader	<a href="#">Vader_Mount</a>	Blackbox	BicoLOG 5070	PX4
7	Yuneec	Octo H520	Yuneec	<a href="#">Yuneec_Mount</a>	Valon 5009	BicoLOG 5070	Yuneec
8	3D-Robotics	X8	Killer	<a href="#">X8_Mount_v2</a>	Valon 5009	BicoLOG 5070	PX4
9	<a href="#">in house (bon, build log)</a>	Hex F550	Chiropter	<a href="#">Chiropter_Mount_v1</a>	Valon 5009	BicoLOG 5070	PX4
10	<a href="#">in house (bon, build log)</a>	Hex F550	Chiropter	<a href="#">Chiropter_Mount_v2</a>	TituTx V1	BicoLOG 5070	PX4
